The increase in arterial density and pressure rate in
vascular resistance in the respiratory passages. Thus
effort of the respiratory muscles is accentuated.
Through the respiratory effort the ventilation
will be maintained. Hypoventilation leads to a reten-
tion of carbon dioxide. The symptoms of the reten-
tion of carbon dioxide, in fact, consequences of hy-
percapnia, not of hypoxia. The increase in
partial pressure of oxygen favors the tendency to hyper-
capnia. (over)
